

What's new in Windows 11?

Microsoft have named Windows 11 as ‘the most secure release yet’. It comes with many new features, which we lay out below:

Health check app

The new health check app is found in settings, and it will advise you on things such as screen brightness levels and if you need to turn this down to give your eyes a break. It also advises on when to change to power saving mode and will give a run-down of your PC's battery percentage levels throughout the day.

In this breakdown of the battery percentage, it will also show you which apps are using either the highest or lowest level of battery and allows you to change the background settings for each of these apps individually.

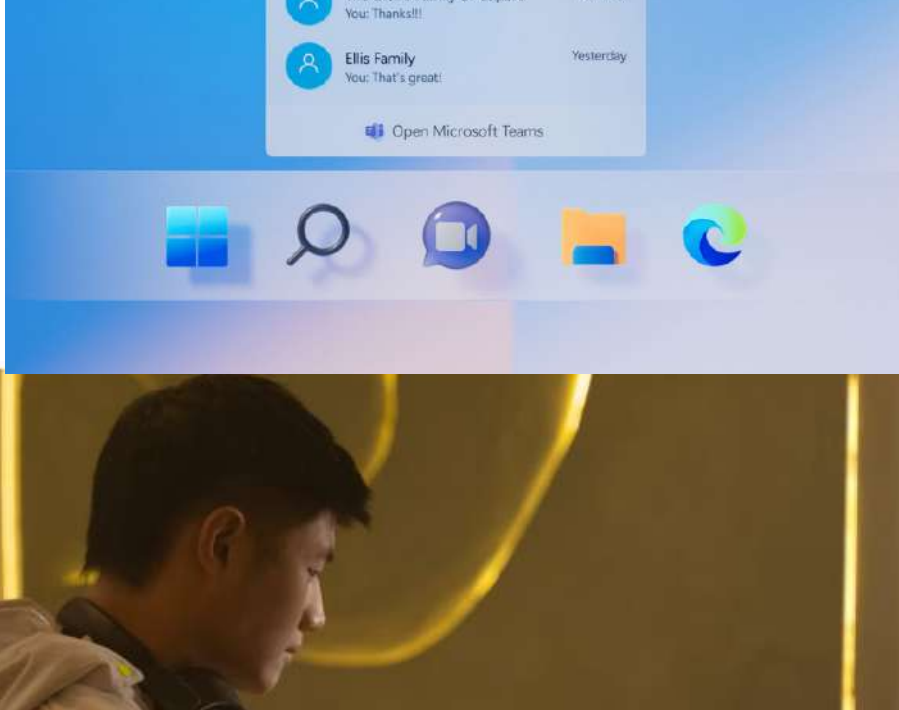

Windows 11

Microsoft Teams integration

The taskbar has now been redesigned and optimized for touch as well as mouse peripherals and has been renamed ‘the dock’.

The dock now features Teams integration built in, which makes it easier to join in with meetings within Microsoft Teams. This is also a continuation of the retirement of Skype, and the switch to Microsoft Teams.

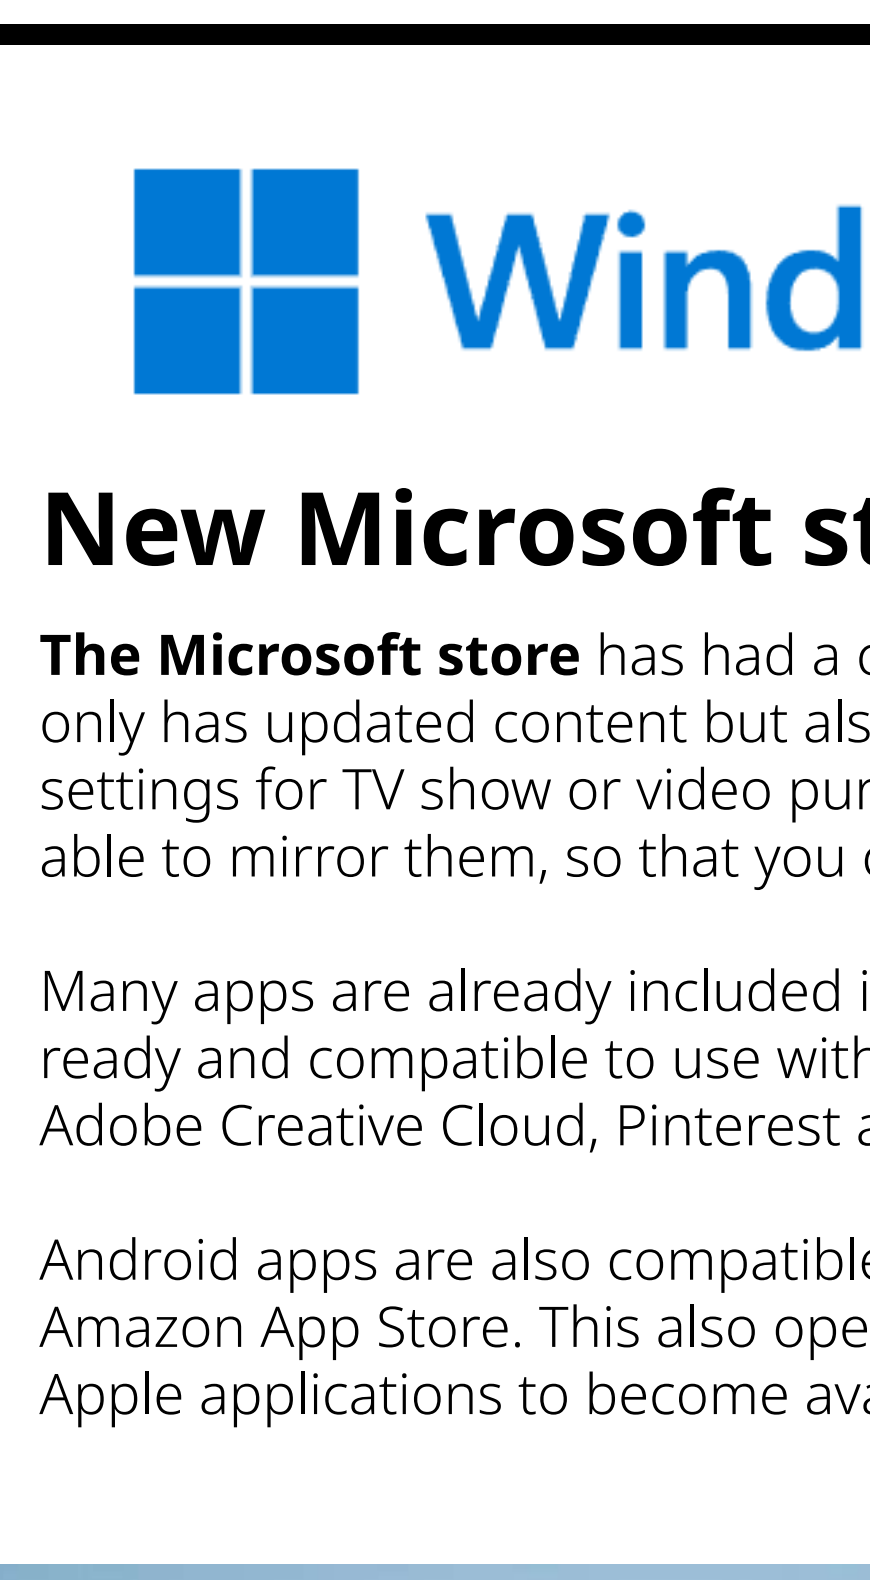

Forget your charger

Top Windows 11 PCs have up to 2.7 more hours of battery life than Windows 10 PCs and up to 3x faster web browsing.⁵

You can watch your favorite shows on a single charge.⁶

Can't stop, won't stop.

HP's laptops with Windows 11 the perfect combo

Faster than Fast
Windows 11 PCs
are up to 2.3x
faster than
Windows 10 PCs.¹
Experience
speed that
matches your
hustle.

Windows 11

New Microsoft store

The **Microsoft store** has had a complete redesign. It not only has updated content but also better options and settings for TV show or video purchases, such as being able to mirror them, so that you can watch on your TV.

Many apps are already included in this redesign and are ready and compatible to use with **Windows 11** including Adobe Creative Cloud, Pinterest and many more.

Android apps are also compatible with this update via the Amazon App Store. This also opens opportunities for Apple applications to become available in the future.

Fluent Design

Fluent Design is what Microsoft have named the fresh look for **Windows 11**. The entire redesign of the system gives a more modern look.

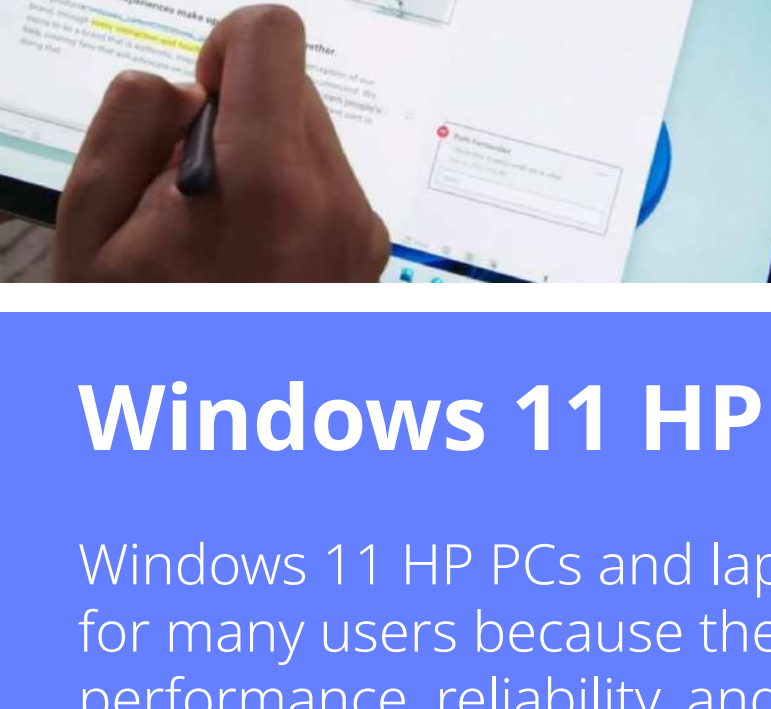

This fresh look comes with the ability to switch between light and dark mode. Additionally, the start menu is now cloud powered and sits in the centre of the screen. This means that it changes depending on the time of day, and the content and tools you are working with in that moment.

Windows 11 also includes the integration of widgets such as news, weather and other third-party widgets are also supported on this platform. In addition to the redesign of the system aesthetics, Microsoft have also redesigned some of their apps to fit with the theme of Fluent Design, such as photos, snipping tool, and paint.

Touch improvements

Windows 11 features easier touch improvements, such as better ways to navigate and more around when using touch screen so that you don't lose track of the apps you are using, and it is easier to rotate the screen.

Windows 11 HP PCs and laptops

Windows 11 HP PCs and laptops are a preferred choice for many users because they combine modern performance, reliability, and security with a wide range of options to suit different needs. HP pairs the intuitive Windows 11 experience—with features like improved multitasking, enhanced productivity tools, and built-in security—with thoughtfully designed hardware, long battery life on many models, and dependable customer support. Whether for work, study, creative projects, or everyday use, Windows 11 HP devices offer a balance of performance, innovation, and value that makes them a popular choice.
